

MICROFILM APERTURE CARD SORTER
MODEL SO 801 MF

THE ONLY SORTER SPECIFICALLY DESIGNED AND
MANUFACTURED FOR MICROFILM APERTURE CARDS

Exacting requirements have to be met by any sorter that mechanically sorts microfilm aperture cards, as opposed to the standard tab card.

The MAUL SORTER, Model SO 801 MF, is specifically designed to sort microfilm aperture cards with the same sure accuracy of standard EDP equipment, but without the danger of scratching or damaging the film.

This new and unique, desk-top sorter will sort any, standard, 80-column, punched aperture card both numerically and alphabetically, in either ascending or descending sequence, at the performance rate of 21,000 cards per hour.
